

Create guided window “progression” for sandbox/tutorial

Task at hand up top

Close button on bottom left

“Done” button on bottom right

Task Constraints:

- During each individual task, the “done” button will be greyed out or toggled off
- Once the user completes the task by, say, placing each cube in its correct zone, the “done” button becomes untoggled and able to progress

Needs:

- Physical window design
- Scripting for toggling buttons on and off
- Scripting supporting each task’s progression
- Progression counter
- “Reset” button in case mistakes are made or user is lost
